

### **Job Summary:**

We are looking for a highly experienced Senior Web Developer with a strong background in Windows/Web Server environments and database management. The candidate should have a minimum of 7 years of experience in these areas, including at least 5 years of hands-on experience in website development using ASP.NET, C#, MVC, and SQL Server. This role also requires knowledge of support and maintenance for domain controllers, DNS, Active Directory, VPN, firewall, IDS/IPS, SMS, and email automation systems.

### **Key Responsibilities:**

1. **Website Development:**
  - Develop, maintain, and optimize web applications using ASP.NET, C#, and MVC frameworks.
  - Design and manage SQL Server databases to support web applications.
  - Collaborate with designers, product managers, and other developers to deliver high-quality software solutions.
2. **Server and Database Management:**
  - Administer and manage Windows and web servers to ensure high availability and performance.
  - Handle database maintenance tasks including backups, optimization, and security management.
3. **Infrastructure Support and Maintenance:**
  - Manage and maintain domain controllers, DNS, and Active Directory services.
  - Oversee VPN configurations and management to ensure secure remote access.
  - Implement and manage firewall rules, IDS, and IPS to protect against network threats.
  - Support and maintain SMS and email automation systems.
4. **Security and Compliance:**
  - Ensure infrastructure and applications comply with security standards and best practices.
  - Conduct regular security audits and implement necessary improvements.
5. **Documentation and Reporting:**
  - Document all configurations, processes, and changes in the infrastructure.
  - Generate and analyze reports on system performance and security incidents.

### **Qualifications:**

- Minimum 7 years of experience in a Windows/Web Server environment and database handling.
- At least 5 years of hands-on experience in website development using ASP.NET, C#, MVC, and SQL Server.
- Proficient in managing domain controllers, DNS, Active Directory, and VPN.
- Experienced in configuring and maintaining firewalls, IDS, and IPS.
- Knowledge of SMS and email automation systems.
- Strong problem-solving skills and the ability to work independently.
- Excellent communication and teamwork abilities.
