OBJECTIVE

Seeking for a challenging role in Power BI and recognize my skills in Data Modeling, Business Intelligence and other skills related to Power BI and Tableau development in meeting the company's goals and objectives.

Professional Summary

- Having 9+ years of work experience in IT Industry which includes various DWBI projects using **PowerBI, Business Objects, Tableau, Snowflake, Oracle, Excel and Advanced Excel**.
- Having around 5 years of experience with **Power BI Desktop** and **Power BI Service** with different data sources such as Snowflake, Oracle, SQL Server, other DB's and Ms. Excel.
- Designed and developed several visually rich, interactive and analytically capable reports for banking, Retail and Telecom domains.
- Expert in Data Analysis, Data Mapping, Troubleshooting data issues.
- Hands on Experience in development of Reports using concepts like joining and blending from different types of data sources.
- Ease in dealing with end users while working on KPIs, Requirements and detail designs.
- I have involved in data validation between reports and data sources.
- Having good expertise on the data transformation in the power query editor.
- Experience in extraction, transformation and loading of data directly from different source systems like Snowflake, Oracle, SQL Server, other DB's and Ms. Excel.
- Experience in Building Data Models in Power BI and creating relationships between various datasets.
- Worked on creating Interactive dashboards using Filter and bookmarks.
- Expertise in Dashboard Designing, Created Customized and interactive dashboards using multiple data sources.
- Worked on Gateway to refresh the data sources and scheduling the data refresh as per business needs.
- Implemented Row-level security as part of security in Power BI Service.
- Experience with Operations and as Project Management Analyst.
- Very good knowledge in Business Intelligence, Data Warehouse concepts and process.
- Good understanding on OLTP and OLAP based data, Business Intelligence, Data Warehouse, Data Marts, ETL Process.
- Quick learner with the ability to master new concepts and applications.
- Worked on the JIRA & Data Asset tracker tool, followed Agile Methodology, and attended Scrum calls.
- Good team player with excellent communication, written, listening and presentation skills with strong attitude to learn modern technologies.
- Coordinating with Onsite team on Deliverables.
- Having good hands on experience with troubleshooting in power bi service.
- Having good expertise using on Direct Query, Import Query, Mixed mode and Live connections to load the data into application from different data sources.

Certification:

Completed the PL 300 Certification.

Employment History:

Working as a Technical manager in Capgemini from Dec 2022 to till date.

Worked as a Professional 2 Information Design Engineer in DXC Technology India Private Hyderabad from Apr-2013 to Nov-2022.

Educational Qualification:

Completed Master of Computer Science (MSc Computers) from Kakatiya University.

Technical Skills:

BI/ETL Tools	PowerBI, Power Apps, Power Automate, SAP BO, Tableau, Informatica, Azure ADF and Data Lake
Databases/Language	Snowflake, Oracle, SQL Server, Teradata, SQL , DAX
Operating System	Windows & Unix
GUI Tools	Toad, Sql Developer, Teradata SQL Assistant, BW
Other	Alteryx (Basics), Office 365 products, Jira, Data asset tracker

Projects Profile:
Peoject1
Client   **:** Ameritas Financial Service.
Duration   **:** Dec -2022 to Till date
Environment   : Power BI, Snowflake

Project Description:
Ameritas as an insurance, employee benefits and financial services company, but we are in the business of fulfilling the financial service. The main Objective of this project is to represent liability, ratios and asset metrices based on ALIC and ALNY for different products so that users can monitor and gauge the effectiveness of their liquidity ratios.

Responsibility:
- Actively involved in gathering requirements from end users, involved in modifying various technical & functional specifications.
- Creating Wireframe based on requirements from business users. Responsible for developing and building the Reports/Dashboards.
- Initially developing the reports with mockup data to give the demo to user.
- Connected power BI with Snowflake via direct query mode as per requirements. Worked on building data models.
- Created parameters in Power Bi to reduce the manual effort to change the environment between Snowflake Dev, Model and Prod.
- Responsible for deploying the reports into Power BI Service.
- Created Calculated columns, calculated tables and other required measures using Data Analysis Expression Language (DAX).
- Worked on creating interactive reports with drill through functionality, slicers, buttons and bookmarks.

- Worked on Gateway to refresh data as per business requirements and creating Apps at Power BI Service.
- Performed Unit Testing of the report against snowflake data.
- Worked on creating supportive documents like data mapping sheet, Technical Specifications document, Unit Testing Document and Prod Deployment document.
- Worked on JIRA, followed Agile Methodology and attended scrum calls.
- Interacting with client daily to discuss on development status of reports.
- Schedule data refreshes with power bi report based on client requirements.
- Reviewed developed reports with business and accepted challenges even report was in production.
- Provided knowledge transition to users and business.
- Proactively involved with other team members, to solve their blockers.
- Push the reports from one workspace to another workspace using different DSN as per client requirement.
- Work on the BA comments of the published reports, if required any changes, until BA comment as Tested and signed off.

Project 2

Client   **:** Pfizer
Duration   **:** Dec-2018 to Nov-2022
Environment   : Power BI

Project Description:

Pfizer Inc. is an American pharmaceutical corporation headquartered in New York City, with its research headquarters in Groton, Connecticut. It is one of the world's largest pharmaceutical companies. The company develops and produces medicines and vaccines for a wide range of medical disciplines.

Responsibility:
- Understanding the client requirements and translating it into business requirements.
- Interacting daily with the client, to discuss on the development status of the Reports as well as about the new requirements.
- Analyzing the data for Report and Dashboard preparation.
- Developed calculated measures using Data Analysis Expression Language (DAX).
- Explored data in a variety of ways and across multiple visualizations using power BI.
- Experience with various advanced features like drill through, interactions, data relationship creation.
- Designed the Reports with Conditional formatting. Applied the different Formatting & Styles to Reports.
- Preparation of Daily, Weekly and Monthly Dashboards.
- Handling Ad hoc Requests.
- Preparation of Understanding document, solution change document UTC documents and Deployment documents.
- Prepared weekly status reports for internal requirements.
- Worked on the Production Tickets during hyper care activity.

Project 3

Client   **:** Zurich,UK
Duration   **:** Dec-2015 to Nov 2018
Environment   : Business objects XIR4.1

Project Description:

Integral Business Analytics Out of the Box (BAOOTB) is a product extension to CSC's Integral Policy Administration line of business applications. This solution is implemented for the ZGROUP in the UK region to help the top executives of Zurich business to get their desired report across different subject areas ZCR

Operations, Finance, Credit Control, Claims, Medical underwriting through the various standard BO web intelligence reports and in case they want to analyze further in detail level for any data of their interest, then they can query the universe on ad-hoc basis and create their own report. Prior to the solution being implemented customer had to depend on legacy Cobol reports which was neither flexible nor user friendly and also had the high dependency on the IT teams. Apart from this solution additionally the integration of SAP Business Objects with LDAP server (Microsoft AD) is also implemented to give more flexibility to the user to log into BI Launchpad with their windows credentials.

Responsibility:
- Involved in collecting requirements, Understanding the Unit Specification/work assignment clearly before starting the implementation. Developed and enhanced the reports in Webi.
- Created new and enhanced the current universes through IDT.
- Developed majority of cross tabs, extensively used Variables, Breaks, Sections, Ranks, Alerts, input controls.
- Developed and enhanced the reports in Webi and Explorer.
- Supported and trained users in developing ad-hoc reports.
- Extensive testing of universes and reports during version migration of business objects from DEV to Prod and worked with Promotion management.
- Advise proper SSRS standards and created documentation on standard set forth for report formatting.
- Scheduled and managed daily/weekly/monthly sales and operational reports based on the business requirements.
- Maintain the existing SSRS reports.
- Scheduling reports to business users.
- Created reports in Business Explorer.
- Having experience with SNOW tool for creating and updating the tickets and CR.

Project 4

Client	: Federated, Global Atlantic, USA
Duration	: Jan-2014 to Nov-2015
Environment	: Business objects XIR4.1

Project Description:

Federated Life has engaged with CSC to co-develop a new version of nbA that is smaller, less complicated, and less expensive to implement for mid-market customers, like Federated Life. The implementation will include the provision of a Management Reporting capability.

Federated Life has engaged with CSC to co-develop a new version of nbA that is smaller, less complicated, and less expensive to implement for mid-market customers, like Federated Life. The implementation will include the provision of a Management Reporting capability.
The nbA Federated Management Reporting capability will be provided using the CSC Business Analytics tool. This tool will enable the business user to build, schedule, execute and view standard reports and perform ad hoc queries.

Responsibility:
- Involved in collecting requirements, Understanding the Unit Specification/work assignment clearly before starting the implementation. Developed and enhanced the reports in Webi.
- Created new and enhanced the current universes through IDT.
- Developed majority of cross tabs, extensively used Variables, Breaks, Sections, Ranks, Alerts, input controls.
- Developed and enhanced the reports in Webi and Explorer.
- Supported and trained users in developing ad-hoc reports.
- Extensive testing of universes and reports during version migration of business objects from DEV to Prod and worked with Promotion management.

- Scheduling reports to business users.
- Created reports in Business Explorer.
- Having experience with SNOW tool for creating and updating the tickets and CR.

Environment: Business objects XIR3.1

Project 5

Client	**:** Qatar Airways, Qatar
Duration	**:** Apr-2013 to Dec-2013
Environment	: Business objects XIR4.1

Description:
In a relatively short time, Qatar Airways has grown to over 100 destinations worldwide, offering unmatched levels of service excellence that have helped excel the award-winning carrier to become best in the world.
Qatar Airways SalesBI is an application to be developed the reports based on Sales.

Responsibility:
- Involved in collecting requirements, Understanding the Unit Specification/work assignment clearly before starting the implementation. Developed and enhanced the reports in Webi.
- Created new and enhanced the current universes through IDT.
- Developed majority of cross tabs, extensively used Variables, Breaks, Sections, Ranks, Alerts, input controls.
- Developed and enhanced the reports in Webi and Explorer.
- Supported and trained users in developing ad-hoc reports.
- Extensive testing of universes and reports during version migration of business objects from DEV to Prod and worked with Promotion management.
- Scheduling reports to business users.
- Created reports in Business Explorer.
- Having experience with SNOW tool for creating and updating the tickets and CR.
